

### \*\*\*PLESK BILLING MODULE INSTALLATION\*\*\*

(Please note .asia domain name is not currently supported by the module!)

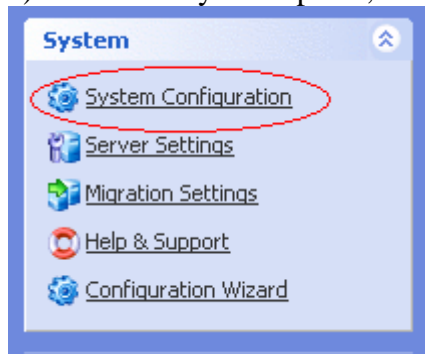

1) Extract the file internetbscorp.php under:

/path/to/plesk-billing/lib-mbapi/include/modules/registrar/

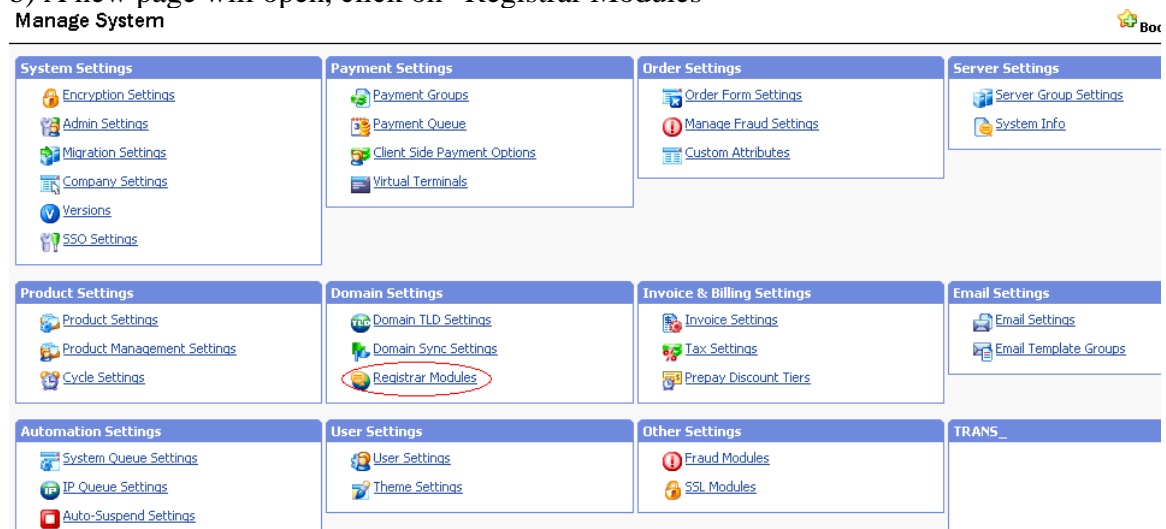

(Example: /var/www/mycompany.com/httpdocs/lib-mbapi/include/modules/registrar)

2) Enable our module from Plesk Billing administration page:

a) From the “System” panel, on the left, click “System Configuration”

b) A new page will open, click on “Registrar Modules”

c) A new page will open, click the small add icon for internetbscorp located at the bottom of the page just below “Unused Registrar Modules”:

## Show Registrar Modules

enom		On	
registercom		Off	
opensrs		Off	
distributeit	www.distributeit.com.au	Off	
dotster		Off	
euordns		Off	
resellone		Off	
namecheap		Off	
ispproxy		Off	
nominet		Off	
<b>Unused Registrar Modules</b>			
internetbscorp			

d) A new page will open check “Yes” for “Enable Internet.bs Corp. registrar plugin”;

### To test our API:

Internet.bs API key = testapi

Password = testpass

Use test server (for testing purposes) = Yes

### For live/production API:

Internet.bs API key = the API Key we have provided to you

Password = you password

Use test server (for testing purposes) = No

The following picture shows how it should look when configured to test our API:

## Edit Registrar Options

Registrars List

**Edit Registrar Options**

Enable Internet.bs Corp. registrar plugin

☐ No  
☒ Yes

Internet.bs API key

testapi

Password

testpass

Use test server (for testing purposes)

☐ No  
☒ Yes

Admin Contact

Tech Contact

Domain Name Servers

Submit

You can optionally specify default administrative and technical contacts and default nameservers.

e) From Plesk Billing go to “Domain TLD Settings” and click the small edit icon for each domain extension you wish to use our module. A new page will load and you will be able to select the registrar for that specific extension, i.e. internetbscorp. Please refer to the picture below:

## Edit

TLD ID	TLD Name	TLD Extension
5	biz	biz

**TLD**

TLD ID	5		
Name	<input type="text" value="biz"/>		
Extension	<input type="text" value="biz"/>		
Registrar	<div><div>internetbscorp</div><div><div>registercom</div><div>opensrs</div><div>distributeit</div><div>internetbscorp</div><div>euodns</div><div>resellone</div><div>namecheap</div><div>ispproxy</div></div></div>		
Active	<input type="checkbox"/>		
Whois Server	<input type="text" value=""/>	Override	
Whois Response	<input type="text" value=""/>	Override	
Auto Search	<input type="checkbox"/>		
Is Transferable	<input type="checkbox"/>		
Transfer Type	<div>Code</div>		
Transfer Minimum Term	<div>1 Year</div>		
Minimum Term	<div>1 Year</div>		
Maximum Term	<div>10 Years</div>		
Local Renew Type	<div>Parallels Plesk Billing Renew</div>		
IDN Support	<input checked="" type="checkbox"/> Yes		
IDN Type	<div>Punycode</div>		
Remote Lock	<input checked="" type="checkbox"/> Enabled		

Select “internetbscorp” from the “Registrar” dropdown list and click “Edit TLD” at the bottom right side.

**NOTE:** if you are using domain extensions not supported by our module, “internetbscorp” will simply not appear in the dropdown list and you will be able to select another registrar supporting that specific extension.

After completing the above steps, configure your price list and enjoy our module!
